Smooth SPÜLBOY<sup>®</sup> connection for your own configuration like John Guest or others.

**ENJOY THE VARIETY**

**ALWAYS FITS!**

# FITTINGS & ADAPTERS

FOR FRESH WATER SUPPLIES

- The photo shows a standard situation of the connections, which can be found in approx. 80% of bars, restaurants and hotels in Eastern and Western Europe.
- You see a tap **1** and an under sink tap **2** with an additional 3/8" outlet **3**.
- Standard SPÜLBOY® devices are supplied with a connection hose and a pressed 3/8" connector **4**. There are 2 connection hose varieties, for NU® devices and Classic devices. You do not need an additional adapter for this installation.

UNCOMPLICATED ALTERNATIVE

- You can also connect your SPÜLBOY® to the water connection **1** alternatively with the use of a reduction adapter **2**. 80% of bars, restaurants and hotels use the same tap with a 22/1" connection.
- To connect your SPÜLBOY®, simply follow pictures 1-3. The SPÜLBOY® appliance can then be connected using the standard connection hose.

**HOW TO CONNECT**

**READY TO GO!**

# FITTINGS & ADAPTERS

UNCOMPLICATED ALTERNATIVE

## QUICK CONNECTOR

- First install the adapter on the tap (siehe explanation II, picture 1+2).
- The quick-connection hose is equipped with a 3/8" connector and a removable transition fitting for a 1/2" connection.
- The hose requires a special connection in order to be connected to the quick connector! If you order the hose including quick connector, we will fit the hose with the appropriate connection ①.
- By pulling the ring on the quick connector up or down, you can easily connect or disconnect the hose from the tap ②.
- This is very helpful for daily cleaning of the appliance and therefore fulfils the highest hygiene standards.

**HOW TO CONNECT**

**EASY PEASY!**

# FITTINGS & ADAPTER

## WATER SWITCH

- If you don't have an undersink tap (explanation I) and you don't want to connect the SPÜLBOY® to the tap (explanation II or III), you can alternatively install a water switch **1** with a 1/2" thread connection **2** between the tap and the connection body.
- The switch must be installed between the upper water outlet and the connection body.
- We can equip the SPÜLBOY® with a 1/2" connection hose **2** or you can use an adapter to connect the 1/2" connection **1** of the water switch to our 3/8" connection hose (see explanation II, pictures 1-3).

**IV**

## QUICK CONNECTOR

- The water switch must be installed between the upper water outlet and the connection body.
- In this case, we equip the SPÜLBOY® with a connection hose including quick connector **2**, to attach it to the water switch **1**.
- The hose requires a special connection in order to be connected to the quick connector! If you order the connection hose including quick connector, we will fit the hose with the appropriate connection **2**.

**V**

**HOW TO CONNECT**

**REALLY FAST!**

# AQUA MANAGEMENT

## FOR MOBILE GLASS WASHING STATIONS

Clean glasses perfectly wherever you want.  
The NU® devices can be operated in our mobile glasswashing stations in just a few simple steps.

**NU on Tour®  
A STAR  
hygiene modules**

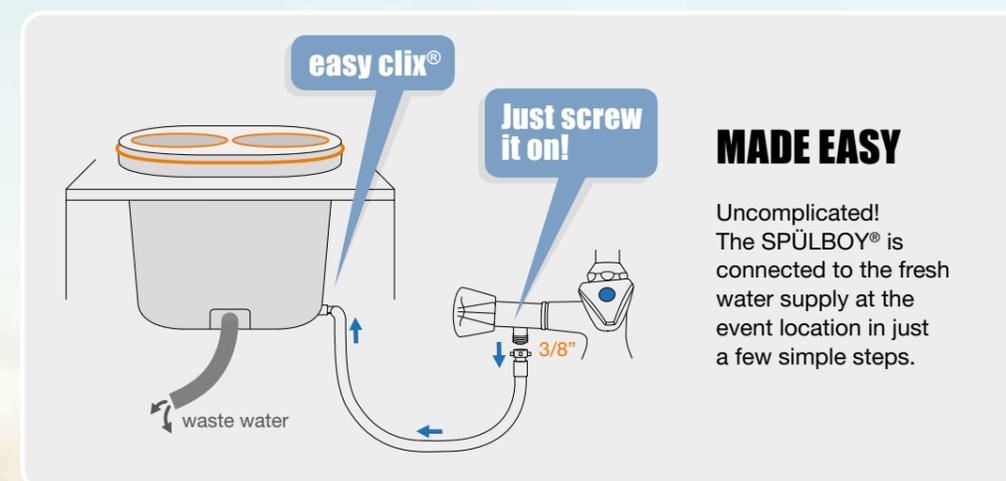

**NU on Tour®  
Performance  
washing counters**

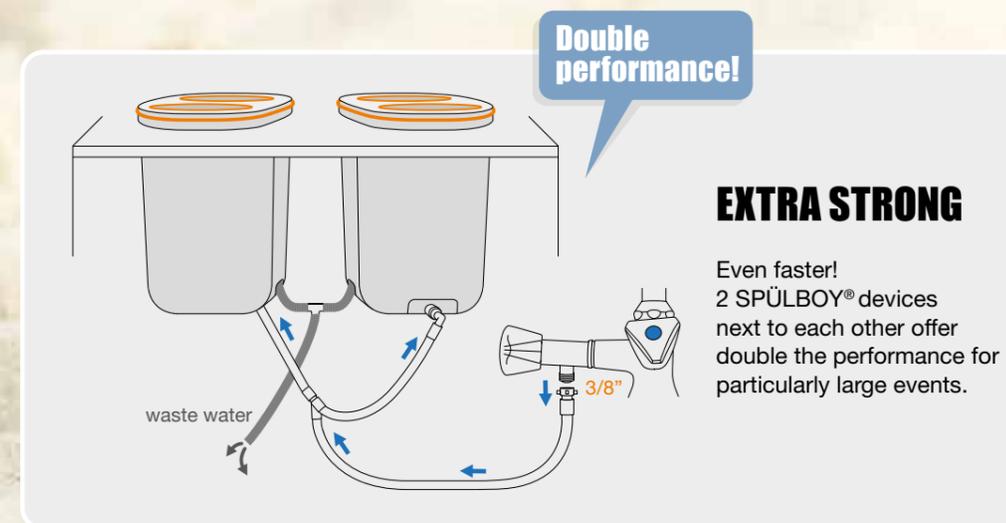

**NU on Tour®  
pickup  
washing tables**

## CONNECTION TO FIXED WATER

### MADE EASY

Uncomplicated!  
The SPÜLBOY® is connected to the fresh water supply at the event location in just a few simple steps.

### EXTRA STRONG

Even faster!  
2 SPÜLBOY® devices next to each other offer double the performance for particularly large events.
